

## Touch horse, goat, hen to know its features

Horse

## FEATURES:

- Horse behavior is best understood from the view that horses are prey animals with a well-developed fight-or-flight response.
- The standard horse is the species *Equus caballus*. It was domesticated from wild horses by humans at least 5000 years ago.
- A male horse is a stallion, and a female horse is a mare, while the general term for a young horse is a foal.
- There is only one species of domestic horse, but around 400 different breeds that specialize in everything from pulling wagons to racing.
- Their feet are quite slim but really strong. It allows them to run fast and for long.

Goat

### FEATURES:

- goat, any ruminant and hollow-horned mammal belonging to the genus *Capra*. Male goats, called bucks or billys and Females are called does or nannys.
- Early Domestication – People domesticated these creatures as one of the very first domesticated animals. Researchers believe that humans began the domestication process at least 10,000 years ago.
- Goat's Milk – Some people drink Goat's milk, but they produce only 2% of the world's milk supply. many people use their milk to make cheese and other dairy products.
- Catgut – People use part of the intestines of Goats and sheep to produce catgut. They use the catgut in musical instruments, and as dissolvable stitches for internal wounds. People still use catgut for these purposes to some extent.

Hen

### FEATURES:

- Hen commonly refers to a female animal: a female chicken, other gallinaceous bird, any type of bird in general, or a lobster. It is also a slang term for a woman.
- hen have a great usefulness to humans. hen can be kept as pets, for breeding, egg laying and a food product. There are many different breeds that come in a variety of colors. They are commonly farmed all over the world.
- they have an additional two cone types which allow them to distinguish violet and ultraviolet light. This is why they crow early in the morning – they can see the sunrise an hour before humans can.
- A flock has a "pecking order" or the social phenomena of dominant chickens having special access to food or nesting locations.
- hens are omnivores.
- They live together in flocks.
